Ropinirole Hydrochloride

National Cancer Institute

Source

National Cancer Institute. *Ropinirole Hydrochloride*. NCI Thesaurus. Code C47710.

The hydrochloride salt form of ropinirole, a non-ergot dopamine agonist with antiparkinsonian property. Acting as a substitute for dopamine, ropinirole hydrochloride binds to and activates dopamine D2 and D3 receptors within the caudate putamen in the brain, thereby improving motor function.
