**Potential competing interests:** No potential competing interests to declare.

The paper is interesting and covers an important and up-to-date topic. Cybersecurity is a major issue nowadays due to rapid digitalization and emergence of Internet of Things and increased use of Artificial Intelligence. The paper is written in a logical and clear manner.

Nevertheless, there are a number of issues that are worth considering. Firstly, the references used are outdated. In the digital reality, a lot changes in a short period of time, so it is necessary to keep up to date and take into account the state-of-the-art publications and research. Moreover, the paper lacks lacks indications for the future, further steps for analysis or providing a cyberhygiene framework.
