Potential competing interests: No potential competing interests to declare.

The authors conduct an interesting research, trying to establish a relationship between entrepreneurship and corruption on radicalization among Moroccan youth. The representativeness of the group of people who answered the questionnaire is not sufficiently well justified. The number of respondents is quite high, but this aspect is not enough. The research conducted by the authors seems to have no limitations, but is it really so? Are the research conclusions indisputable? Some clarifications on these aspects are necessary to give value to the research.
