# Borderline Papillary Mucinous Cystadenoma

National Cancer Institute

## Source

National Cancer Institute. *Borderline Papillary Mucinous Cystadenoma*. NCI Thesaurus. Code C4186.

A low malignant potential cystic epithelial neoplasm usually arising from the ovary. It is composed of glandular cells with intracytoplasmic mucin. It is characterized by an atypical epithelial proliferation and a papillary growth pattern. There is no evidence of destructive stromal invasion.
