Potential competing interests: No potential competing interests to declare.

In this work, the authors investigate the potential impacts of the AI industrial revolution on the economic efficiency of energy. However, the main purpose of the study is not clearly stated in the Introduction section. Additionally, the quality of the English is not up to standard, which is understandable since we are not all native English speakers. I recommend that the authors use the services of a professional English language editor.

Below are some specific comments that need to be addressed:

1. I have reservations about citing personal blogs.
2. Authors are advised to cross-check their data sources against more reliable sources, such as the annual BP Statistical Review of World Energy.
