**Potential competing interests:** No potential competing interests to declare.

The text explores diverse strategies to address dengue and related arboviruses. Some research groups in Mexico have delved into various resources to contribute to solving this health issue. It is acknowledged that a single solution does not exist, and this manuscript briefly outlines them. Emphasis is placed on the need for improved vector control and the scaling up of experimental treatments to preclinical and clinical models. Another crucial aspect is the critical evaluation of existing vaccines to facilitate their application in endemic countries like Mexico.
