

# Review of: "Investigating the Levels of Obsession, Fear, and Self-Care Behaviors Related to COVID-19 in Fully Vaccinated and Partially Vaccinated Diabetic Patients"

Elhadi Miskeen

Potential competing interests: No potential competing interests to declare.

Overall, the article provides valuable insights into the psychological aspects of COVID-19 among diabetic patients. However, there are several points that could be addressed to enhance the clarity and robustness of the study. Addressing these points will likely enhance the clarity, completeness, and impact of the article.

- The title could be more concise. Consider shortening it while maintaining clarity. For example, Psychological Factors in COVID-19: A Study on Fully and Partially Vaccinated Diabetic Patients.
- The abstract is comprehensive but could be more succinct. It should briefly mention the methodology, key findings, and implications.
- It would be helpful to include the specific aims or hypotheses of the study.
- Provide a more focused introduction, outlining the specific aims and objectives of the study.
- Clarify the rationale behind selecting Torbat Heydarieh vaccination centers and why this location was chosen over others.
- Elaborate on the available sampling method, addressing any potential biases.
- Mention the timeframe of data collection to provide context.
- Include more demographic details of the participants (e.g., age range, gender distribution) for a more comprehensive understanding.
- Provide additional details on the reliability and validity of the instruments used, especially for the COVID-19 Obsession Scale.
- Discuss the clinical implications of the findings and how they contribute to the existing literature.
- Address potential limitations of the study, such as the generalizability of findings beyond the study population.
- Suggest avenues for future research based on the study's limitations or areas that require further exploration.
- Summarize the key findings concisely.
- Emphasize the practical implications for healthcare providers and policymakers.
- Proofread the article for grammatical and typographical errors.
- Provide more information on ethical considerations, such as how participant consent was obtained and maintained confidentiality.

My recommendation is to be accepted with minor corrections as described in my report.
