First, thank you for inviting me to review this manuscript.

The concept assessed in this study is a very important issue, but it has some problems which I will mention below. I hope that by reforming them, the work can be improved.

1. This study is not written in the standard framework or standard format, and its format and structure need to be modified.
2. The gap study and its importance have not been mentioned, and they need to be rewritten.
3. In the introduction and literature review, there are many explanations that tire the reader. It is suggested that the text be more concise and that important points be pointed out.
4. This study does not have a methods section, and the method based on which the researcher conducted the study is not known. It is suggested that the method be specified in a separate section and described accurately, with all the details including the type of study, the population under study, the method of conducting the work, etc.
5. In the beginning, it is better to have the results section. The results of the study should be presented in the form of a table, and the important points should be presented in the form of text in the results section, which would be more understandable for the reader.
6. Overall, the most important problem of this article is not having a clear framework and not separating the parts of the manuscript, including introduction, method, results, discussion, and conclusion, which should be corrected.
