Potential competing interests: No potential competing interests to declare.

The idea behind this research is very promising which aims to delve deeper into jellyfish-like self-deployable actuators. Also trying to bridge the gap between theoretical concepts and pragmatic applications. The following points need to be considered by the authors team:

- 1- In the abstract section a clear problem statement needs to be highlighted.
- 2- Recent related researches in this field need to be compared to show how this work is significant.
- 3- The results figures have shown many related numbers and outcomes but it lacks discussions that show how this new AI jellyfish is promising.
- 4- Finally, suitable applications are not there.
