Dear Author

How are you?

Here's Reviewer information

1- The abstract didn't explain the details of the manuscript (results and conclusions).

2- Where is the table of nomenclatures?

3--Figure 1 needs more details (dimensions of each room with type of building materials)

4- Discuss the results in the figure.2

5- How did the authors calculate (C) of temperatures in Figure 2?

6- In Figure 3, is this calibration to air temperature or what?

7- The data in Table 3, from any reference was taken?

8- The sentence "The primary objective is to discover a quick and cheap approach to measuring how

temperature affects people's health and happiness", it should move to aims in the last paragraph of the introduction section.

9-The conclusions should be more obvious and make them at points, e.g. (1--,2--,.....)

10- The orange curve in Figure 7, what is this? Explain this

11- The manuscript needs new references, because almost them references are old

Best Wishes
