Potential competing interests: No potential competing interests to declare.

General Observations:

1. The title needs to be revisited, as noted in the review
2. The methodology is clear by using meta critical approach .
3. There is need to take care of spellings, articles and punctuation
4. There is need to a clear conclusion apart from the summary drawn.
5. The language flows and friendly to read
6. The analysis is logical in its meta critical approach.
7. I, therefore, suggest that if the author should take into considerations all the above observations, then, the article is good for publication.
