The topic of the article is interesting. The study reveals interesting findings regarding the Role of Green Legacy in Promoting Sustainable Development and Combating Climate Change. The study's findings will be useful for Ethiopian government and stakeholders, including individuals, government sectors, and other experts. Here you can find my comments:

1. What is the novelty of the study?
2. This research focuses on the Ethiopian government's current efforts to establish a green legacy for a variety of goals. The authors simply used data obtained from government experts and participants via interviews and questionnaires. So, how do the authors justify the reality of their findings and make their study into a scientific paper?
3. To help readers understand the study's findings, pay attention to the methods and discussion sections of the paper.
4. Introduce in the scientific background of your study the importance of green legacy in the other countries, please give more background based on the recent scientific findings.
5. The authors mentioned five main goals of green legacy, so supportive idea should be included in the results and discussion section. 6. Based on these results, what recommendations are for the various stakeholders and government moving forward experience of green legacy? Are there policy changes that should be implemented? What future research should be conducted? Are the results found in this study or the methods used applicable to other areas? What insights or implications do the results offer? etc. Please go over each of these in detail.
