Review of: "Assessment of COVID-19 from Features Extraction of Exhaled Breath Using Signal Processing Methods"

Sihem Hamza[1]

1 University of Sfax

The paper entitled "Assessment of COVID-19 from Features Extraction of

Exhaled Breath Using Signal Processing Methods" is an interesting subject. But, I have a few comments on this paper:

1. The paper is well organized, but the text is not justified. Therefore, all text should be justified.

2. The size of Figures 2 and 3 makes them difficult to read.

3. What is the type of signal used in this paper, and why?

4. What are the novel aspects of your work and its limitations?
