**Potential competing interests:** The author declared that no potential competing interests exist.

It is the adverb of the abbreviated word “IUPAC” (which means “International Union of Pure and Applied Chemistry”). It is often used before (mostly) or after the verb (e.g., named, called, and known) to indicate strictly following the rules, principles, formulas, recommendations, preferences, styles, and formats of the IUPAC in doing certain actions related to chemistry, mainly establishing chemical nomenclature and terminology (of, e.g., chemical elements and compounds).
