

Peer Review

Review of: "Aedes Distribution and Meteorological Effect on Ovitrap Index in Coastal Area of Besut, Terengganu: An Entomological Study"

Faisal Hafeez¹

1. Ayub Agriculture Research Institute, Faisalabad, Pakistan

A good and informative article that addresses a suitable strategy to alarm and further initiate the management strategy.

Needs to update the references and improve the statistical analysis and discussion sections.

Statistical analysis: it needs more information and elaboration on how the data was taken and what test was applied to the data.

Explain all parameters step by step.

The discussion is poorly written. It needs comprehensive updating in the light of recent and most relevant references.
