Dear Authors,

Thank you for the opportunity to revise the above paper. Unfortunately, your manuscript requires substantial rewriting, as it lacks several pieces of information necessary to fully appraise your work.

I suggest you provide thorough information on the donor population and their co-morbidities (DBD, DCD, ICU characteristics, etc...). Information on the type of transplant, including the type of graft, CIT and WIT, biliary reconstruction, and early functional recovery, is lacking.

I suggest being consistent with an acknowledged definition of biliary lesions (such as the one by the Dutch group) and categorizing biliary complications according to this.

Finally, English has to be revised throughout.

I warmly encourage resubmission.
