

# Review of: "Visualization of Home Security Sensor System Based on IoT Server"

Christian Graham<sup>1</sup>

<sup>1</sup> University of Maine System

**Potential competing interests:** No potential competing interests to declare.

**Introduction:** At least cite a source or two to back up your claim or confirm the claim is supported somewhere in the previous research literature.

Introduction is written in a easy/conversational style. It does limit threats to the home though. There are many other threats to homes that is not addressed here and should at least be acknowledged. Also, first time using acronyms, they should be spelled out. for example: LPG.

**Methods section:** Really does not describe how the study was developed or tested. The abstract says its a qualitative study but I do not see how the study was conducted, tested, etc. The paper could have discussed how homeowners used the sensor prototype and how they felt about it after implementing. There is also no discussion of limitations.

This appears to be more of a technical paper than qualitative study. If that is the intent of the paper, the author should explicitly state this.
