Potential competing interests: No potential competing interests to declare.

The article is well designed and written. It is concise and easy to understand. It conforms to the design and methodology standards. However, there are no demographic data of the participants especially the residence, i.e., neighborhoods, gender and economic status. The results would have been more solid if correlation between different factors are made. Abbreviations including CPTED should be writtten in full title at the beginning, i.e., in the first place they are mentiioned.
