Actinomyces radingae

National Cancer Institute

Source

National Cancer Institute. *Actinomyces radingae*. NCI Thesaurus. Code C86113.

A species of anaerobic, Gram positive, rod shaped bacteria assigned to the phylum Actinobacteria. This bacteria is alpha hemolytic, catalase and indole negative, hydrolyzes esculin and does not reduce nitrate. *A. radingae* infection is often associated with breast, chest, and back abscesses.
