Potential competing interests: No potential competing interests to declare.

Study on disclosure will always be relevant among PLHIV. Thus study is good and will contribute to knowledge.

There was no evidence that ethical approval was secured for such an important study among the population of PLHIV.

This should be clearly stated

Qualitative interview would have added more values to allow respondents express their minds freely on their experiences

Although, the number who experienced negative consequences were few, they are still human beings and should be put into perspective. Hence, recommendations to further guide in non-violent disclosure should have been offered

Future studies could also explore how they cope with the negative consequences of disclosure
