Potential competing interests: No potential competing interests to declare.

This manuscript, entitled "**Toward the Realization of Nanogate Capacitors: In Search of Practical Advice**" is a preliminary report calling for practical suggestions and advice for realizing nanogate capacitors. This manuscript can be accepted, but I have some remarks before it can be publishable. (**major revision**)

1. The abstract is unattractive. It is suggested that the importance of this research work be written in detail.
2. The idea of the research seems to be interesting, but the set goals are not achieved. What is the main significance of the paper in comparison to related published works?
3. You are requested to add some content to amplify how this research work contributes to forwarding the field of study. The authors should enhance the discussion and comparison with the results in the literature.
4. Different strategies to design high-efficiency energy storage devices should be specifically given.
5. The manuscript lacks some recent references in this field of work.
6. The whole manuscript needs to be checked for grammar and typo mistakes.
