Potential competing interests: No potential competing interests to declare.

The theme is appreciable, and the article is well written. But I have a few personal concerns like the ones listed below.

- a. A clear schematic diagram on the mode of action or effect of the components of the cinnamon could have been added.
- b. A tabular format of the list of components and mode of action of the compounds could have made the article more meaningful.
- c. The methods for purification or isolation of these compounds from cinnamon are found missing.
