

Review of: "Sustainable Agriculture: Aquaponics-Integrated Greenhouse Cultivation of Cantaloupe with Drip Irrigation System"

I. Patrick Saoud¹

¹ American University of Beirut

Potential competing interests: No potential competing interests to declare.

Right at the start of the manuscript, you write about membrane technology, which usually refers to desalination. Change that to greenhouse use, which is what you really mean to say.

In Table 1, replace the word "trees" with the word "plants." Cantaloupes are vines, not trees. Do the same throughout the text.

Fig. 2 is not readable for English speakers.

The title of the article says aquaponics, but I do not see any aquaculture component.
