Potential competing interests: No potential competing interests to declare.

- This notable study sought to analyze the scholarly literature on leishmaniasis indexed in the Scopus database. It is an essential work that aims to comprehensively analyze the primary statistical aspects and collaboration networks in leishmaniasis research. This article contains many references that may be useful to researchers, scholars, and students in this field.
- The abstract offers an accurate summary of the paper. However, the abstract lacks a clear purpose. So, it is preferable to amend the subtitle of the first paragraph of the abstract to include the background and aims.
- The discussion section needs further improvement, especially since this review focused on articles from certain countries, while leishmaniasis is more serious and endemic in other countries.
- The grammar needs some revision throughout the article.
