The abstract part is not well written. It didn't indicate the methodology of the study (especially method of data analysis and the type of secondary data used). The research article's main goal is to examine the impact of management information systems (MIS) on the coffee farm sector in SWER but reserach findings related to the impact of of MIS on the coffee farm sector are not investigated through out the review as well as in the abstract part. Important theories related to the issue are not included. Even the litrature, the reseracher, included simply talks about the important of MIS but not its impact and also applied only few empirical studies. As per my observation, the contribution of the study to the learning community is almost nill, therefore; it is not suitable for publication.
