PRKAR1B-related neurodegenerative dementia with intermediate filaments

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. PRKAR1B-related neurodegenerative dementia with intermediate filaments. ORPHA:412066

PRKAR1B-related neurodegenerative dementia with intermediate filaments is a rare, genetic neurodegenerative disease characterized by dementia and mild parkinsonism with poor levodopa response. Presenting clinical manifestations are memory problems, short attention span, disorientation, language impairment, rigidity, bradykinesia, postural instability and behavioral changes, including apathy, anxiety and delusions.
