

Review of: "The Influence of Hot Extrusion on The Mechanical and Wear Properties of an Al6063 Metal Matrix Composite Reinforced With Silicon Carbide Particulates"

Gururaj Hatti

Potential competing interests: No potential competing interests to declare.

The representation of the paper is neat as per the findings

- 1) The graphs are not too clear, which can be drawn using software like Origin for clearer presentation.
- 2) SEM images are not clear and need to be replaced by good ones.
- 3) Where SEM images could be presented to understand more about the influence of the process on the wear.

Remaining is good
