Potential competing interests: No potential competing interests to declare.

Here are four points that the authors could consider enhancing the text:

1. Include a Detailed Methodology Section:

While the document briefly mentions the indices calculated and the use of remote sensing technology, a more detailed explanation of the methodology, including data collection processes, image processing techniques, and neural network applications, would provide readers with a clearer understanding of the study's approach.

2. Address Limitations and Challenges:

It would be beneficial for the authors to discuss any limitations or challenges encountered during the study, such as data availability constraints, potential biases in remote sensing analysis, or uncertainties in the results. Acknowledging these limitations can strengthen the credibility of the research findings.

3. Provide Recommendations for Future Research:

Offering suggestions for future research directions based on the study's outcomes can add value to the document. This could involve proposing additional analyses, exploring different applications of remote sensing technology, or identifying areas for further investigation to build upon the current findings.

4. Enhance Accessibility and User Interaction:

While the interactive map is a valuable tool for visualizing data, the authors could further enhance accessibility by providing user guides or tutorials on how to navigate the map effectively. Additionally, incorporating feedback mechanisms for users to provide input on the map's usability and functionality could improve the overall user experience.

By addressing these points, the authors can enrich the document and provide a more comprehensive and engaging reading experience for the audience.
