Potential competing interests: No potential competing interests to declare.

The research paper focus to address the issue and provide simple implementable environmental design measures.

The objective of the research work is clear, however would like the authors to improve the manuscripts further with following concerns.

1. This literature should be briefly reviewed further and integrated to serve as the conceptual context on how you interpret your results and any conclusions that may follow.
2. What are the contributions from your research?
3. How does it improve our overall understanding of the subject material?
4. What future directions in research are suggested from your findings and conclusions.
5. All of these should be addressed in the context of the cited (and thoroughly discussed) peer reviewed literature.
6. It would be best if the Discussion was a separate section – set aside from the Results – and the Discussion should naturally flow from the key results and findings.
7. At present, this component is somewhat weak in your manuscript and needs improvement for a peer reviewed journal.
