Review of: "Numerical Prediction of the Steady-State Distribution Under Stochastic Resetting from Measurements"

Mario Abundo¹

¹. Dipartimento di Matematica, University of Rome Tor Vergata, Rome, Italy

I think that the article is interesting and appreciable, at least in the ambit of Physics and Chemistry (though I can only judge relatively, being a mathematician).

Really, there are some critical aspects, which bring me to suggest publication in Qeios, only after minor revision (see the attached report).
