The idea of the concept "Developing and Supporting High-Performing Faculty Teams in Engineering Institutions" by the author is really appreciable. The article gives a good comprehensive review about the facts that are taking place in higher educational institute, especially in engineering institutes. The deserving faculty members face problems in many aspects as observed by the author. But at the same time there are many institutes where the appraisal process are very true in nature and no favoritism is entertained. The author could have discussed about the appraisal process system in different institutes and could have carried out a comparative study on the same. The questions surveyed are also very constructive in nature. The article could have been more research oriented if more quantitative approach was a part of the present study. Overall, a useful and thought provoking review by the author.
