Arcanobacterium bernardiae

National Cancer Institute

Source

National Cancer Institute. *Arcanobacterium bernardiae*. NCI Thesaurus. Code C86148.

A species of facultatively anaerobic, gram positive, coccobacilli shaped bacteria assigned to the phylum Actinobacteria. This bacteria is non-motile, non spore forming, catalase negative, does not hydrolyze esculin or urea and ferments glycogen, erythritol and ribose. *A. bernardiae* has only been found in humans, and is associated with urinary tract infections and septic arthritis.
