INHA wt Allele

National Cancer Institute

Source

National Cancer Institute. *INHA wt Allele*. NCI Thesaurus. Code C52046.

Human INHA wild-type allele is located within 2q33-q36 and is approximately 3 kb in length. This allele, which encodes inhibin alpha chain protein, is involved in the inhibition of follitropin secretion in the pituitary gland and plays a role in the regulation of diverse cellular functions.
