

Review of: "Neural Quantum Superposition and the Change of Mind"

Inge Svein Helland¹

¹ University of Oslo

Potential competing interests: Among other references I mention also one of my own papers

This is a nice article describing special kinds of decision making from the point of view of a quantum model. My only objection is that there are no references to the general literature on quantum cognition and quantum decision theory. Here are a few references:

Pothos and Busemeyer (2022). Quantum cognition. *Annual Review of Psychology* 73, 749-778.

Ashtiani and Azgomi (2015). A survey of quantum-like approaches to decision making and cognition. *Mathematical Social Sciences* 75, 49-80.

Yukalov and Sornette (2014). How brains make decisions. *Springer Proceedings in Physics* 150, 37-53.

Busemeyer and Bruza (2012). *Quantum Models of Cognition and Decisions*. Cambridge University Press, Cambridge.

Helland (2023). A simple quantum model linked to decisions. *Foundations of Physics* 53,12.
