

Review of: "Classical Thermodynamics: Primacy of Dissymmetry Over Free Energy"

Lars Söderholm¹

¹ Royal Institute of Technology

Potential competing interests: No potential competing interests to declare.

The author discusses the historical growth of thermodynamics, in particular the combination of the first and second laws of thermodynamics. The historical discussion of the important contributions is interesting. The paper is, however, quite long. The paper is in need of a substantial reduction in size and a clearer focus on the most important points of the work.
