Potential competing interests: No potential competing interests to declare.

0) The Introduction is poor, with few citations and fails to highlight the relevance of the work.

1) Figure 1 should present a drawing of the region under study within the context of Asia.

2) Part of the legend in Figure 1 and the names of the subregions must be translated from Chinese to English.

3) The Results and Analysis need to be better discussed by making comparisons with results found by other authors.

4) The axis legends in Figure 2 need to be translated from Chinese to English.

5) The 1:1 line must also be presented in Figure 2. This line and the regression line must have different labels.

6) Tables 3 and 4, in their titles, must say what the acronyms that characterize each interpolation method mean.

7) The caption for Figure 3 must be translated from Chinese to English.

8) The number in Figure 3 is repeated twice.

9) The second Figure 3 must have the caption and names of the sub-regions translated from Chinese to English.

10) The Y-axis legend must be translated from Chinese to English in the second Figure 3.

11) Translate the captions for Figures 5 and 6.

12) In addition to the Mann-Kendall test, the Pettitt test could be applied to indicate the year of change.

13) The number of references can be increased.
