Congenital Lipoid Adrenal Hyperplasia

National Cancer Institute

Source

National Cancer Institute. *Congenital Lipoid Adrenal Hyperplasia*. NCI Thesaurus. Code C131426.

Congenital adrenal hyperplasia resulting from the deposition of lipid in the adrenal glands due to a defect of intracellular cholesterol transport or metabolism. The condition is characterized by deficiencies of glucocorticoids, mineralocorticoids, and sex steroids: 46,XY infants are undervirilized, whereas 46,XX infants have no genital manifestations.
