Potential competing interests: No potential competing interests to declare.

I think that the introduction part lacks theoretical buildup with proper citations to provide significance for the study. The significant novel point of the study over the precedent studies is not clear. In the Abstract, the background of the study is very general. Moreover, I have a major objection about the language of the article. In Results and Discussion, I would suggest presenting the results by increase/decrease %age. The discussion lacks a mechanistic approach. There are two major concerns with this MS. The first one is grammatical mistakes, language errors, typographical mistakes. Second, the authors did not conceive a strong idea from the review literature.
