Potential competing interests: No potential competing interests to declare.

Even though the topic is approached precisely, it's crucial that it be further developed as it seems too brief. It resembles more of a simple definition of the topic rather than being explored as a comprehensive and concrete idea, something that is widely necessary for a scientific article.

You need to further develop the results and provide a methodology that is more compatible with what you worked on. Likewise, all the results displayed in the tables should be expanded upon. In scientific articles, you shouldn't include data that won't be properly developed; you could have summarized that part more. Verify your sources and enhance your bibliography. There are many areas of opportunity for improvement.
