Potential competing interests: No potential competing interests to declare.

[1] The novelty of the present study needs to be explained clearly at the end of the introduction.

[2] The chemical treatment process needs to be explained elaborately.

[3] The authors needed to cite more latest articles as references in the relevant field.

[4] The authors only explained the mechanical properties of the developed composites. The technical discussion related to the composite performance in terms of chemical treatment was not discussed in detail.

[5] Why the chemical treatment enhanced or degraded the composite performance should be explained in a detailed way.

[6] Instead of using sample-3 or sample 2, use the composite name to ease the understandability of the readers.
