Thank you for allowing me to review your manuscript entitled: The Birth Satisfaction Scale: Igbo adaptation, validation, and reliability study. I do believe the topic is a good fit for this audience as adaption and validation of instrument BSS - R can be very needed to your population. I agree with the recommendations that were published in review on Nov 19, 2022, especially:

1. I recommend in some instances replace fractions (two-thirds, three-fourths) with percentages or put the percentages in parenthesis,
2. I recommend to state and explain the formula that was used to determine the sample size
3. I recommend to use past tenses for example under the descriptions of sample size, study instrument, and scoring
