CD200 wt Allele

National Cancer Institute

Source

National Cancer Institute. *CD200 wt Allele*. NCI Thesaurus. Code C80106.

Human CD200 wild-type allele is located within 3q12-q13 and is approximately 30 kb in length. This allele, which encodes OX-2 membrane glycoprotein, may be involved in the modulation of both myeloid cell proliferation and macrophage activity. Genetic variation may be associated with the relapse of acute lymphoblastic leukemia.
