A well-written paper with certain limitations is the one titled "Analyzing the Effects of Organic Amendments on Soil Erosion Dynamics: A Comprehensive Study on Application Methods and Timing." My recommendations for overcoming the limitations and improving the manuscript are included below.

- It is necessary to improve the Abstract. There are a few incorrect sentences and grammatical errors. You must also include quantitative information in the abstract.
- It would be better to entitle section 2 as Materials and Methods.
- You indicate measurement intervals as days and, in some places, as months in your manuscript, along with a flowchart. Either days or months would be a better unit of interpretation.
- It is preferable to begin the Results section with text. In your text, you only addressed the highest and lowest percentages of sand, silt, and clay. However, you omitted information on any significant variation or not.
- The conclusion should be objective-oriented despite going into details about the findings.

Overall, the manuscript is informative and effective in understanding the influence of soil organic amendments on soil erosion dynamics.
