Potential competing interests: No potential competing interests to declare.

Although the article is very interesting, it should really be refocused towards a deeper review of the current state of the art. Instead of simply listing points, the focus should be on developing and explaining the contributions that new artificial intelligence techniques are making to education.

The article should begin with a discussion of the previous techniques that were already in the market before the explosion of new AI techniques. From that point, it should highlight the innovations that these new techniques can bring to improve education. This should be supported by presenting current works that have already been published in articles and conferences, showcasing the improvements described in the articles.

Currently, I see it still in an initial state.
