Potential competing interests: No potential competing interests to declare.

After I revised the paper, I have the following comments:

- 1.- It is recommended to review the writing in English.
- 2.- How was the day selected for the sensitivity analysis?
- 3.- You must describe the equations to calculate the minimum, average, and predicted air temperatures.
- 4.- You must describe the method to determine the LAI.
- 5.- It is recommended to describe the methodology used in this work with a flow chart.
- 6.- How much was solar radiation on the walls reduced due to the trees?
- 7.- You must have uniformity in the numbering used in Table 2.
- 8.- What was the comfort temperature equation?
- 9.- It is recommended to review the discussion and conclusions.
