This article has a title with framework keywords, but studying the whole paper, it gives me not much sense of how the framework is organized. Besides, the literature review needs to be updated with newer related papers of years 2024, 2023, etc., and also the figures put in the paper have minimum quality, and the details of each figure are not clear. In addition to these problems, the paper has no obvious implementation for some case study or specific benchmark, and suddenly it reaches the conclusion. Then it is recommended that the authors try to expand their research and make the article richer with some qualified contents.
