REVIEWER'S COMMENTS:

The manuscript overall is good. However, a few suggestions and amendments have to be considered before it is ready to publish.

1. The abstract is too brief. Please add methodology/software as well as the significant results obtained through the research.
2. Some of the symbols are not suitable, i.e., (δ ; convenient when matter appears as several d.o.fs)
3. Avoid any abbreviations that are not familiar, such as, "...d.o.fs, c.f."
4. "Figure 4, with the code..." Which code? No description of the numerical computation is stated in the manuscript.
5. Check equation (9).

Thank you.
