Potential competing interests: No potential competing interests to declare.

1. Title:

- Number of appropriate words and is related to the objectives of the text and the development of the text.

2. Abstract:

- The main objective of the study is described.
- The abstract does not exceed 250 words.
- Include keywords.

3. Introduction:

- Relevant background is provided to understand the purpose and importance of the study.
- The definitions used are adequate.
- The objective is appropriate and relates to the title.
- It is necessary to mention from what year to what year the bibliography was used, what types of texts were used, and in what search engines they were found.

4. Surgical technique:

- The hospital and the ethics committee that approved the surgical technique are not mentioned.
- The surgical technique is adequately described, and the images are related to the text.

5. Discussions:

- The study is compared with other studies, but it is necessary to compare with more studies.

6. Conclusion:

- It is necessary to add a conclusion.

7. References:

- The references are correctly cited in the Vancouver format and in the correct order.

Comments:

Excellent study, of great impact for future surgical procedures. The objectives proposed at the beginning of the study were met. However, with an inadequate methodology, different points need to be met to meet the quality of a research report, including authorization from the hospital ethics committee. In this format, I do not recommend its publication.
