Review of: "Superintelligence: Identification of Friend or Foe Future Landscape of Cooperation with Non-human Intelligence"

Hongzhi Kuai¹

1. Maebashi Institute of Technology, Maebashi, Japan

This is an interesting review paper related to superintelligence. They discuss superintelligence from AI, alien, and other viewpoints. Especially, they propose some factors with respect to superintelligence, like generic enhancement, medications, and biological and neural options. I am curious about why these factors were chosen. Can they be integrated with each other to enhance the creation and development of superintelligence?

Also, please add the contributions of the paper, specifically comparing them with other reviews.

Encourage the authors to add some practical work to superintelligence, which can inspire many more readers easily.

Please reconsider the title and its relevance to the main text. Also, it would be better to give a paragraph to shortly describe the key points of each section and reconstruct the paper.
