INSERM. (1999). Orphanet: an online rare disease and orphan drug data base.

Adamantinoma. ORPHA:55881

Adamantinoma (AD) is a primary low-grade malignant bone tumor that occurs in more than 80% of cases on the anterior surface of the tibia (tibial dyaphysis). Most ADs are symptomatic or present with pain, swelling, bowing deformity or pathological fracture. Metastases especially in the lungs may be observed.
